Table A2: Variables & Sources

Variable	Description	Source
MCW Export	<i>arms exports in Mill. TIV</i>	SIPRI (2015c): Arms Trade Register, http://armstrade.sipri.org/armstrade/page/trade_register.php Accessed 10 February 2015
International Conflict	at least 500 conflict-related deaths due to international conflict, intensity scale 0 to 10	
Ethnic Conflict	at least 500 conflict-related deaths due to domestic ethnic conflict, intensity scale 0 to 10	Major Episodes of Political Violence (MEPV) and Conflict Regions, (Marshall, M. (2014). Major Episodes of Political Violence (MEPV) and Conflict Regions 1946-2013, http://www.systemicpeace.org/inscr/MEPVcodebook2013.pdf).
Civil Conflict	at least 500 conflict-related deaths due to domestic civil conflict, intensity scale 0 to 10	
Regional Conflict	sum of the conflict scores of all neighbouring states	
#Borders	number of bordering states	
HR	<i>Human rights situation, 1 (very good) to 5 (very bad), data coverage 1976-2013</i>	<i>Political Terror Scales dataset</i> , (Wood, R. & Gibney, M. (2010). The Political Terror Scale (PTS): A re-Introduction and a Comparison to CIRI, in: http://www.politicalerrorscale.org/datafiles/hrq%20pts.pdf Accessed 11 February 2015.)
Embargo	1 Embargo by EU 2 Embargo by UN 3 Joint embargo by EU & UN	SIPRI (2015a): Multilateral Arms Embargoes, http://www.sipri.org/databases/embargoes/research/armaments/transfers/controlling/embargoes Accessed 29 January 2015
Log-GDP/pc Importer	GDP per capita of importing country in constant 1990 US-dollars using purchasing power parity conversion rates	The Maddison-Project (2013). New Maddison Project Database, http://www.ggd.net/maddison/maddison-project/home.htm Accessed 10 February 2015.
GDP-Germany Growth	Annual real GDP growth per capita in Germany	
Military Expenditure	annual growth in German military expenditures	1953-2007: COW v4.0 (Singer, J. D., Bremer, S., Stuckey, J. (1972). Capability Distribution, Uncertainty, and Major Power War, 1820-1965 – Version 4.0. In B. Russett

		(Ed.): Peace, War, and Numbers (pp. 19-48). Beverly Hills: Sage.) 2008-2013: SIPRI (SIPRI (2015): Military Expenditure Database, http://www.sipri.org/research/armaments/milex/milex_database Accessed 16 December 2015.
Geographical Distance	Distance (in km) between the capitals of Germany and potential importing country divided by 100	CEPII GeoDist database (CEPII (2015: GeoDist, in: http://www.cepii.fr/ CEPII/en/bdd_modele/presentation.asp?id=6 Accessed 10 January 2015).
Partner	Dummy indicating whether country is member of NATO or EU	
Regime Difference	squared difference between the Polity IV value for Germany (10 for the whole period) and the value of the (potential) importing country. The resulting scale ranges from 0 (total congruence) to 400 (total dissimilarity)	Marshall, M., Gurr, T., Jagers, K. (2014), Polity IV Project, http://www.systemicpeace.org/inscr/p4manualv2013.pdf Accessed 10 February 2015.
CINC CINC ²	Military capabilities of potential importer; Scale 0-100; Military capabilities squared; extrapolation for the period 2008-2013	Comparative Indicator of National Capabilities provided by the COW Project (Singer, J. D., Bremer, S., Stuckey, J. (1972). Capability Distribution, Uncertainty, and Major Power War, 1820-1965 – Version 4.0. In B. Russett (Ed.): Peace, War, and Numbers (pp. 19-48). Beverly Hills: Sage).
Oil	Dummy indicating whether country is an international top 15 oil producers in a given year.	BP (2014). Historical Data Workbook, http://www.bp.com/en/global/corporate/about-bp/energy-economics/statistical-review-of-world-energy.html Accessed 11 February 2015
#Trade Partners	number of potential trading partners for Germany in a given year	
Sovereign Years	number of years a potential trading partner is sovereign since entering the pool of potential trading partners	
Government Ideology	Ideology of government, ranges from -100 (extremely left-wing) to +100 (extremely right-wing). In	CMP (2015): Germany, https://manifestoproject.wzb.eu/countries/Germany Accessed 08 February 2015

the most common case of a coalition government, a weighted overall ideology score was calculated based on the respective values of coalition partners and their vote shares relative to the overall vote share of the governing coalition.

Israel Country dummy indicating whether importing country is Israel

Saudi Arabia Country dummy indicating whether importing country is Saudi Arabia

a - Given limited data availability of the human rights variable to the years 1976-2013, the reported coefficients were estimated for post 1982 and post 2000 only.

Robustness Checks

To test the robustness of our results, we also estimated dynamic models with a LDV. Given that for this specification the Wald tests indicated statistical independence of the two decision stages, we estimated the two equations separately. Hence in one set of tests, we estimated the extensive margin equation by pooled probit and the intensive margin equation by pooled OLS – both with robust clustered standard errors. Alternatively, we also estimated separate dynamic fixed-effect models including a fixed-effects logit for the first stage. This, of course, changed the set of our independent variables, since the parameters of time invariant variables can no longer be estimated in a fixed-effect specification. A LDV specification with fixed-effects is, however, not without problems since it is well-known to produce biased parameter estimates because the LDV is correlated with the error term (Nickell 1981). The bias should be very small however given that it decreases in T and we analysed a fairly long time period. Note also, that inclusion of a LDV can potentially suppress the effects of the other independent variables and soak up explanatory power. Models where the parameter of the LDV is close to 1 should therefore be interpreted with caution.

As our final robustness tests, we also estimated both random-effects as well as mixed random-fixed effects Heckman models. In particular, the extensive margin was estimated by a static random-effects probit model, which included all our time-related effects. Based on this estimation the “non-selection hazard rate/inverse mills ratio” was computed for each observation. The inverse mills ratio was then included in a static linear fixed/random effects panel regression to control for potential selection bias. For these specifications we opted to not include a lagged dependent variable to avoid the above mentioned problems. We are confident that taken together these sets of alternative models should ensure the robustness of our findings and enhance our understanding of the results.

Table A4: Robustness Tests

Variables	Extensive Margin						Intensive Margin							
	1953-1989			1990-2013			1953-1989				1990-2013

Model I-E is a dynamic pooled probit model with clustered standard errors. Model II-E is the static random-effects probit model. Model III-E is the dynamic fixed-effects logit. Model I-I is a dynamic pooled OLS Regression with clustered standard errors. Model II-I is the static random effects Regression including the non-selection hazard rate of Model II-E of the extensive margin. Model III-I is the static fixed effects regression which includes the non-selection hazard rate of Model II-E of the extensive margin. Model IV-I is a dynamic fixed effects regression. ^a: The joint effect of UN & EU embargoes cannot be calculated due to the perfect prediction of failure during the post-cold war period (there is no variance on dependent variable). In the cold-war period there are no cases of joint embargoes!
